To whom it may concern, regarding Glenn Gordon:

Prior to my retirement I worked near 22 years in New Product Development at Cummins Allison Corp. (now CPI, Crane Payment Innovations), last in the position of Senior Manager, Technology.

There, I watched Glenn mature from a very driven, very creative, if not the most creative Engineer I had the pleasure of working with to a mature engineer that, in short, really embodies the complete New Product Development Package.

Glenn has the engineering, design, manufacturing and documentation background & experience to arrive at functional, manufacturable, low cost design concepts faster than most, if not all I worked with. He is also well suited to guide these designs into production.

While Glenn constantly stays at the cutting edge of efficiently using the engineering tools at his disposal and utilizes them exceptionally well and fast with the overall assembly and design goal as well as future production in mind, he constantly applies his experience and past lessons learned very well to design improvements, self improvement as well as improvements benefitting the team or others in achieving their tasks.

And, lastly, if I may say so as a retired person, after all his years in Corporate America, Glenn has managed to keep his drive in turbo mode and his creative mind very sharp indeed!

Kindly

Ralf Jaeger

*** I am available for additional questions. Due to frequent, often international travel, at times w/o cell coverage, it may work best to initially contact me via email.
